Setup KDS

EDGEWORKS SOLUTION PTE LTD

What is HTTP and HTTPS

HTTP stands for Hyper Text Transfer Protocol

To summarise, that is how you get transferred web pages when you visit a website

S refers to secure. Where by the webpage is secured.

This means that the website is legitimate and verified by SSL certificates.

SSL Certificates are created to ensure encrypted connection between browser and server

Things to prepare before the setup

1. Know whether to use HTTPS or HTTP
   - If HTTPS, have a list of IP.
2. Update to 5.0.0.3

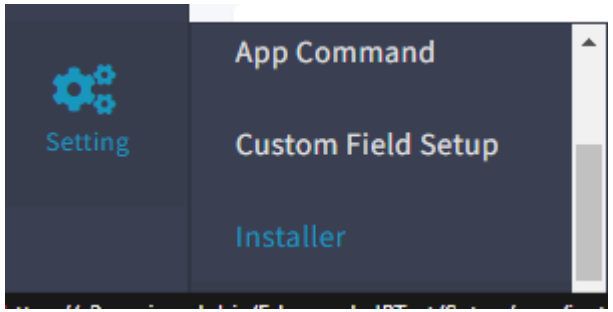
KDS Side

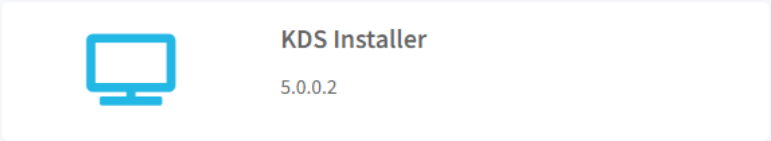
Step 1: Download

Select the KDS installer in the Setup Page.

In the settings there should be a installer path.

Then click “KDS Installer”



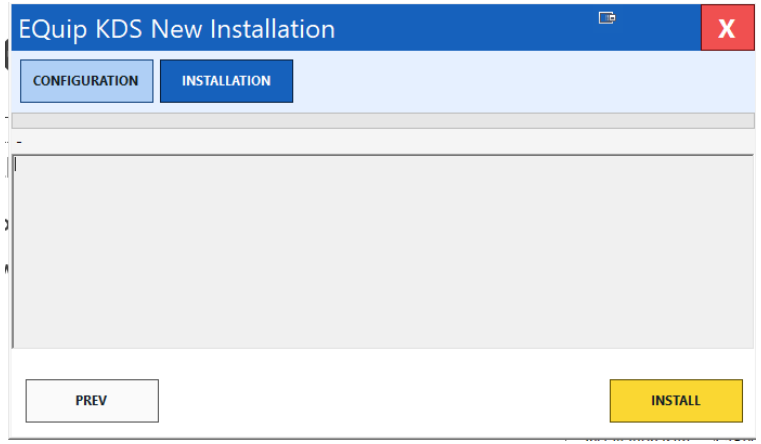


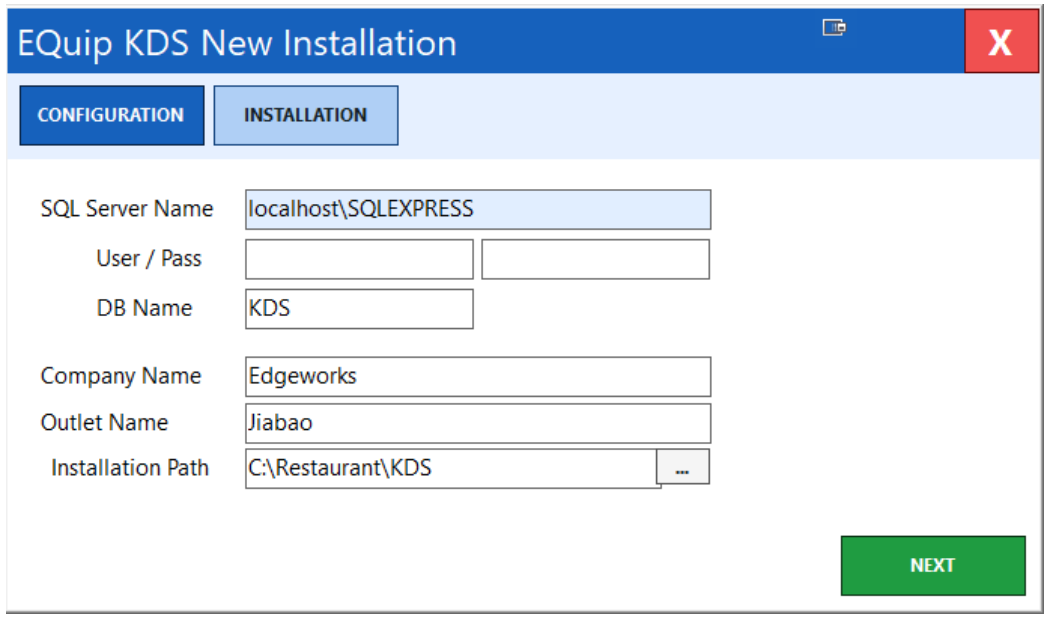
If such option is not available, contact either JB or Yohan

Step 2: Extract and Install

Fill in the information as per requested

User/Pass can leave blank if localhost allowed window authentication

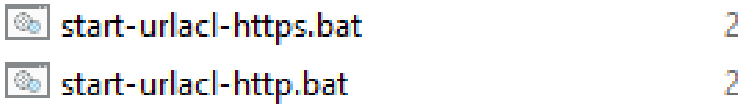




After going to this screen. Click “INSTALL”

Step 3: Open PORT

Based on the Batch file select either you want HTTPS or HTTP.



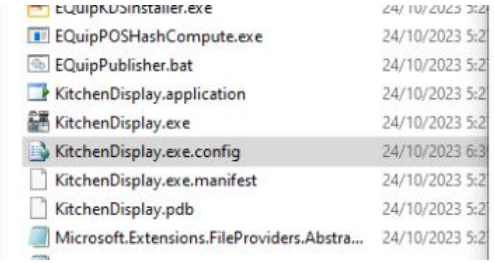
This is to open the PORT for KDS so that it can be connected.

Step 4:

Look for
key="DisableLocalAPIHttps"

-- Put to False if using HTTPS

-- Put to True if using HTTP



```
<uri />
<appSettings>
  <add key="NO_OF_CALLBACK_THREAD" value="5" />
  <add key="DisableLocalAPIHttps" value="false" />
</appSettings>
<connectionStrings>
  <clear />
  <add name="KDS" connectionString="Data Source=DESKTOP·
```

Step 5: Add Certificate (only for HTTPS)

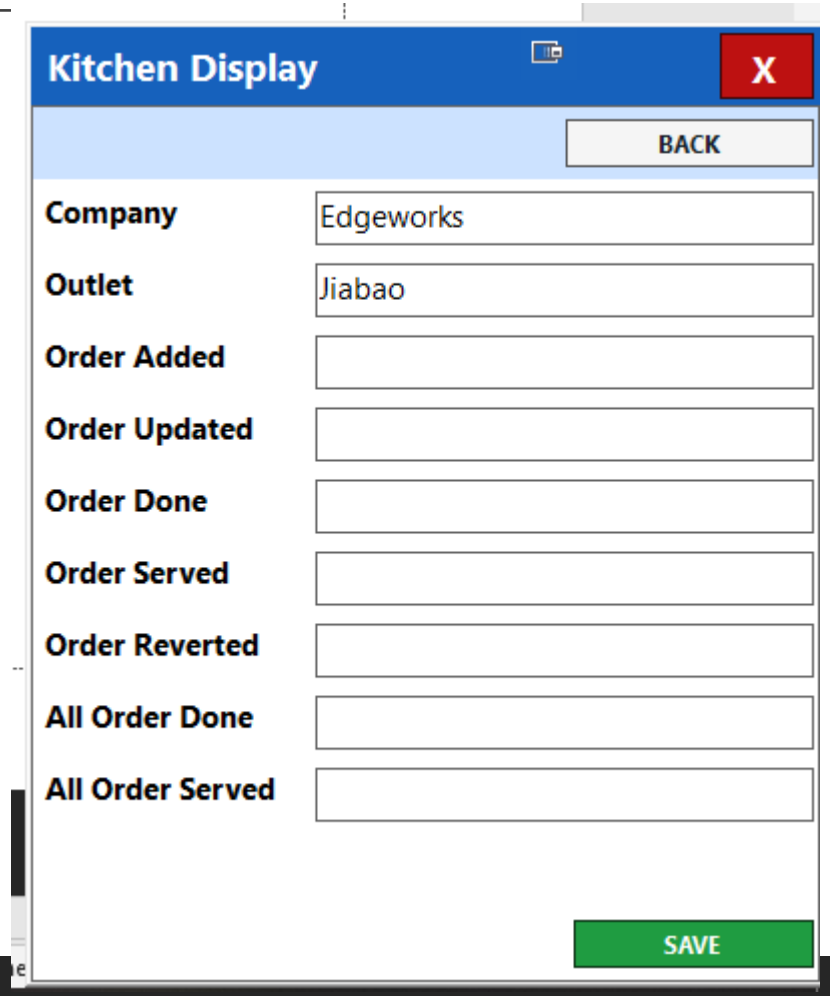
https://docs.google.com/presentation/d/1nGROVk3eNNc6oD9CGUPii2xowV0PN5JV59SeJKsY38I/edit?usp=sharing

Step 6: Additional Configuration

Open KitchenDisplay.exe and fill in the details if needed.



Live Demo

POS Side

Step 1: Open PORT

Similar to KDS there is PORT to be opened as well.

start-urlacl - http.bat - Notepad

File Edit Format View Help

```
netsh http del urlacl url=https://*:9001/
netsh http del urlacl url=https://*:9002/

netsh http add urlacl url=http://*:9001/ user=everyone
netsh http add urlacl url=http://*:9002/ user=everyone
```

Step 2:

Look for
key="DisableLocalAPIHttps"

-- Put to False if using HTTPS

-- Put to True if using HTTP

  <add key="InventoryConnectionString" value="-" />
  <add key="DataServiceProvider" value="08211111" />
```

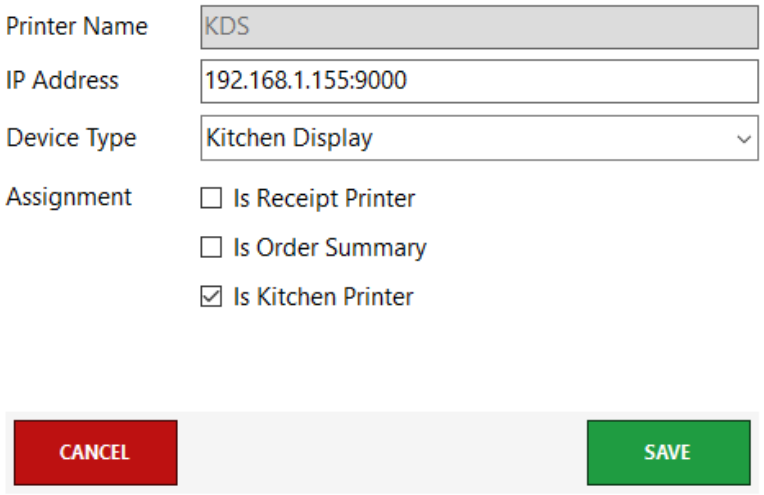
Step 3: Create Printer

Create a KDS with the following

IP Address:9000

Device Type is Kitchen Display

Assignment: Is Kitchen Printer



Step 4: Add Certificate (only for HTTPS)
